Projects

Today's Moon

A React application that displays data about the current lunar cycle

- Created a simple mockup, personal Kanban board, and primary objectives for the project
- Implemented a mobile-first site design and efficient data flow throughout the component hierarchy
- Wrote tests using Jest and React Testing Library to ensure accurate data retrieval and correct rendering of conditional components

JavaScript Calculator

A mostly plain JavaScript calculator with four basic operations, decimals, negative numbers, and history

- Constructed the logic for accurate mathematical operations and running history of the current equation
- Researched and implemented the MVC design pattern to the project to increase scalability
- Collaborated with a mentor to ask questions about new concepts and refactor and improve code

Work Experience

Markdown Lead Associate

*Burlington Coat Factory
September 2018 - October 2019*

- Analyzed weekly reports to create a plan of action and led other associates in labeling sale items
- Increased the store's total number of marked down products scanned per week
- Assisted with inventory, receiving, and organizational tasks around the store as needed
